No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence encodes a hyaluronan-binding protein. The specification describes four hyaluronan-binding protein, known as WF-HABP, WF-HABP, OE-HABP, and BM-HABP. The polypeptides are useful for treating diseases such as proliferative conditions, metastasis, inflammation, ischemia, host defence dysfunction, immune surveillance dysfunction, arthritis, multiple sclerosis, autoimmunity, immune
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            GAAGCTGCGGACCATGGCAACCTACAACCAGCTCTCCTATNNCCAGAAGGCCAAGTACCAC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      3436 TAIGTGGGAGATGGCTTCTCATGCAGTGGGAACCTGCTGCAGGTCCTGATGTCCTTCCCC 3495
                                                                                                                                                                                                                                                                                                                                         The present invention relates to sequences for rat and human HARE (Hyaluronic Acid Receptor for Endocytosis, ABA04648, ABA04662, AAMA7675 and AAM47684). HARE can bind specifically to at least one of hyaluronic acid (HA, also known as hyaluronan), chondroltin (C) or chondroltin sulphate (CS). HA is an extracellular matrix component of all tissues, in particular cartilage, skin and vitreous humour. HARE is the endocytic receptor responsible for removing HA and other glycosaminoglycans from the circulation. The present sequence is the coding sequence for human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             2956 ATGACAGGCCCGGGCAAGCACAAGTGTGAAGTGTAAAAGTCACTATGTCGGAGATGGGCTG 3015

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ò
                                                                                                                                                                                                 The invention describes a method of targeting a compound to a cell or tissue of an individual expressing a functionally active hyaluronan (HA) teceptor for endocytosis (HARE) or a cell that does not express functionally active HARE. The method involves using HA molecule, a chondroitin molecule (CD), a chondroitin sulphate (CDS) molecule, and/or a monoclonal antibody raised against a HA-binding domain of HARE. The method is useful for targeting a compound, preferably a chemotherapeutic agent or a radioisotope to cell of an individual, especially a human, expressing HARE on its surface (e.g. gene therapy). Also described is a method useful for preventing increaction between a cell having at least one of a HA coat, a CD coat and CDS coat and a cell expressing HARE on its surface. This second method is useful for preventing metastasis by preventing interaction between tumour cells having HARE on its surface. The second method is useful for preventing materiasis by preventing interaction between tumour cells having HARE on its surface. The invention also describes a method useful for detecting the presence of HA, CD and CDS in a biological fluid. This sequence encodes the human 190kba Hyaluronan cells expressing (HARE)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    3082 AACTGTGAGCCGGAGCAGCTGCCCATTGACCGCTGCTTACAGGACAATGGGCAGTGCCAT 3141

The invention describes a method of targeting a compound to a cell or tissue of an individual expressing a functionally active hyaluronan (HA) receptor for endocytosis (HARE) or a cell that does not express tunctionally active HARE. The method involves using HA molecule, a chondroitin molecule (CD), a chondroitin sulphate (CDS) molecule, and/or a monoclonal antibody raised against a HA-binding domain of HARE. The method is useful for targeting a compound, preferably a chemotherapeutic agent or a radioisotope to cell of an individual, especially a human, expressing HARE on its surface (e.g. gene therapy). Also described is a method useful for preventing interaction between a cell having at least one of a HA coat, a CD coat and CDS coat and a cell expressing HARE on its surface. This second method is useful for preventing meteastasis by preventing interaction between tumour cells having HA, CD or CDS coat and con-tumour cells expressing HARE on its surface. The invention also describes a method useful for detecting the presence of HA, CD and CDS in a biological fluid. This sequence encodes a longer version of the human coal having a response the number of the human and the coal having a response the number of the human and the coal having a response the number of the human and the coal having the presence of HA, CD and CDS for the coal that the coal that the number of the human are coal that the coal that the coal that the coal that the number of the human are coal that the coal that the number of the human are coal that the coal that the coal that the coal that the coal that the number of the human are coal that the coal that the coal that the coal that the coal that the coal that the coal that the coal that the coal that the coal that the coal that the coal that the coal that the coal that the coal that the coal that the coal that the coal that the coal that the coal that the coal that the coal that the coal that the coal that the coal that the coal that the coal that the coal that the coal that the coal that t
                                                                                                                                                                                                                                                                                                   Targeting compounds e.g. chemotherapeutic agent to cell of subject expressing functional active hyaluronan receptor for endocytosis of by using hyaluronan, HARE, and/or monoclonal antibody that binds to
